AGGARWAL STEELS

Plot no E-372, Riico Industrial Area Bhiwadi, Alwar, Rajasthan

Basic Policies on HSE, Quality and Information Security

Aggarwal Steels (hereafter called Aggarwal Steels) recognises that complying with all applicable laws and regulations on Health, Safety and Environment (HSE), Quality, Information Security and the Protection of Personal Data, and also meeting the requirements our clients and society place on us in these areas, are essential prerequisites for conducting our business and fulfilling our social responsibilities. We abide by the following basic policies:

1. HSE (Health, Safety and Environment)

a) Continuously reaffirm and share the conviction that *"Safety takes precedence over all other considerations"*, and create and maintain safe and healthy conditions in all workplaces, including fabrication shops, yards, project sites, storage areas and business travel.

b) Strive to complete every job with no accidents and no harm to people, by taking all practical steps to eliminate hazards and reduce HSE risk through preventive measures, safe work practices, permit-to-work controls and proper use of PPE.

c) Provide our people with work environments and opportunities that maintain and improve their physical and mental health, and encourage their consultation and participation in HSE matters.

d) Take appropriate safeguards against threats and risks to business assets, plant, machinery and materials.

e) Minimise environmental burden by saving resources and energy, reducing, segregating and recycling waste (including steel scrap, welding consumables and paint waste), and preventing pollution in the course of our work.

f) Recognise and honour HSE commitments through HSE processes. At Aggarwal Steels, HSE is a non-negotiable line-management function and a condition of employment. Every employee has the right to stop work if they consider conditions unsafe in any way.

2. Quality

a) Provide high-quality products and services, from structural steel fabrication and storage rack systems to stainless steel products, that take care of HSE and meet the requirements of our clients and society.

b) Comply with Aggarwal Steels' rules and procedures, and make full use of our fabrication capabilities, welding standards, inspection methods and engineering expertise.

c) Achieve Zero Defects in our products and services.

3. Information Security

a) Maintain the confidentiality of information assets that Aggarwal Steels owns and controls, including client drawings, designs and commercial data, protect them against loss, destruction or unauthorised alteration, and ensure they are available when needed.

b) Prevent information security, cyber security and privacy-related incidents and, if an incident occurs, investigate the cause and implement corrective actions.

c) Establish and maintain information security control plans and measures necessary for business continuity.

4. Management Systems

Establish and continually improve the effectiveness of our management systems (ISO 9001, ISO 14001, ISO 45001 and ISO 3834) by promoting risk-based thinking, including objective setting, hazard identification, risk evaluation, determination of countermeasures, execution control, review and monitoring, education and training, and by ensuring employee engagement, in line with management's firm belief that securing HSE, Quality and Information Security is a prerequisite for business continuity.

5. Awareness and Training

Continually improve the mindset of all employees towards HSE, Quality, Information Security, Privacy and Protection of Personal Data through awareness programmes and training.

These policies apply to all staff members of Aggarwal Steels at every location. Aggarwal Steels will also share the spirit of these policies with clients, suppliers, contractors, business partners and other related parties, and cooperate with them to achieve these objectives.
